

Blockchain Needs Report for REAL

Presale / Crowdsale

Sale for 1,100,000 tokens for \$5 each. (Eth/USDC/USDT)

\$5.5M total collected in Eth/USDC/USDT

\$5M will be used for the Liq Pool

\$500k will be used as start up cost and overhead

Token sale ethereum contract

Liquidity Pool

Start Liquidity Pool with \$5M collected and 1M REAL tokens

Uniswap Liquidity Pool TVL \$10M

Possibly pool for each crypto payment type received (Eth/USDC/USDT)

Lock LP tokens for 10 years to build community trust.

Website

- Scans blockchain wallet associated with account to confirm status level before granting access to the dashboard with token total being the only factor of membership status.
- Connect wallet. Maybe connect multiple wallets and we can scan each Ether wallet associated with the member. And then sum the token total for membership level.
- Must have verified wallet and 1+ token to see dashboard
- Levels are 1/10/100/1000
 - a) 1+ viewer status
 - b) 10+ interactor (community/chat)
 - c) 100+ education/properties records
 - d) 1000+ voting status
 - e) Anyone can submit a proposal at their own expense
- Gray out dashboards or lock dashboard if zero token balance.
- Pay 1 REAL token to submit a property or start a community event. This part connects on the Ether main net. There are ether fees from the network in addition to our REAL token. This is simply just a transfer of their REAL token to us (the platform)
-

Vesting Contracts

Vesting contracts for founders and seed investors to build community trust.

Tokens were already transferred into founders wallets.

Vesting contracts will apply to F1, F2, SI1, SI2, Emp, Org. Each wallet currently holds tokens.

- 5yr / 20% per year starting instantly with exact token amounts
- 10yr / 10% per year starting instantly with exact token amounts
- 5yr / 20% per year after 12 month with exact token amounts
- 10yr / 10% per year after 12 months with exact token amounts
- 10yr / 100% after 10yr with exact token amount
- 5yr / 20% per year after 12 months with exact amounts

- What will happen with the token? I want it to stay in the wallet to use in the dao.
-

Whitelisted Airdrop

- 1 token airdrop to grant holders viewer access level
- Create 25k user audience
- On Ethereum to add a network expense associated with them selling. To incentivize them not to sell the 1 token because of the high ethereum blockchain fee.
- Cannot sell until the liquidity pool is created. The token is not sellable until there is a pool to sell it on.
-

Layer 2

- Public chain that shows the public all of the data.
- Private & Centralized chain with nodes that we own and control. Only our nodes run on the network. No other nodes can join.
- Mirrored token balance from ethereum. Meaning our chain only sees the token balance on the ethereum wallet. Our chain holds no tokens for users. No bridging of assets. Too much liability and risk.
- Organization to upload property management documents as nfts to add them to blockchain. Designed to allow a "resubmit" button that will create new nft tied to the original and others.
- Voting on the blockchain. Allowing users to cast votes on the platform. Votes are counted and verified on the chain.
- Community Events that can be created with free or paid attendance
